

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in this application.

1. (Previously Presented) A water-soluble container comprising at least one discrete chamber for containing product, wherein at least a part of a first wall of said at least one chamber will dissolve before a remainder wall of the chamber dissolves to allow product to escape, the at least part of the first wall which dissolves before the remainder wall dissolves defining a releasable part, and when the at least part of the first wall dissolves the releasable part is released undissolved.

2. (Previously Presented) The container as defined in Claim 1, wherein the releasable part is a panel and the at least part of the first wall at least partly surrounds the panel whereby the panel is released when the at least part of the first wall has dissolved.

3. (Currently Amended) The container as defined in Claim 1, wherein the at least part of the first wall includes at least one clip element which retains the releasable part until dissolved.

4. (Previously Presented) The container as defined in Claim 1, wherein the at least part of the first wall is thinner than the remainder wall of the container.

5. (Currently Amended) The container as defined in Claim 4, wherein the ~~the~~ thinner ~~at least~~ part of the first wall is arranged on the interior surface of the chamber wall.

6. (Previously Presented) The container as defined in Claim 1, wherein the container is formed by injection moulding.

7. (Previously Presented) The container as defined in Claim 1, wherein at least part of the material from which the container is formed is polyvinyl alcohol.

8. (Previously Presented) The container as defined in Claim 1, wherein at least part of the material from which the container is formed is a polylactic acid.

9. (Previously Presented) The container as defined in Claim 1, wherein at least part of the material from which the container is formed is starch-based.

10. (Previously Presented) The container as defined in Claim 1, wherein the whole of the container is formed from the same material.

11. (Previously Presented) The container as defined in Claim 1, wherein the container is flexible.

12. (Cancelled)

13. (Previously Presented) The container as defined in Claim 1, further comprising a second discrete chamber for containing product, wherein at least a part of a first wall of said second chamber will dissolve before a remainder wall of the second chamber dissolves to allow product to escape, and the at least part of the first wall of the second chamber which dissolves before the remainder wall thereof dissolves at a different dissolution rate than the dissolution rate of the at least part of the first wall -whereby products in the chambers escape sequentially therefrom.

14. (Previously Presented) The container as defined in Claim 13, wherein the container is formed by injection moulding.

15. (Previously Presented) The container as defined in Claim 13, wherein at least part of the material from which the container is formed is polyvinyl alcohol.

16. (Previously Presented) The container defined in Claim 13, wherein at least part of the material from which the container is formed is a polylactic acid.

17. (Previously Presented) The container defined in Claim 13, wherein at least part of the material from which the container is formed is starch-based.
